**FUEL TECH AWARDED MULTIPLE AIR POLLUTION CONTROL
ORDERS TOTALING \$2.1 MILLION**

WARRENVILLE, Ill., Mar. 24, 2009 – Fuel Tech, Inc. (NASDAQ: FTEK), a world leader in advanced engineering solutions for the optimization of combustion systems in utility and industrial applications, today announced receipt of multiple air pollution control contracts totaling \$2.1 million. Principal among these was an order from an existing customer for NOxOUT[®] Selective Non-Catalytic Reduction (SNCR) systems to be installed on two municipal solid waste (MSW) incinerators in France. Equipment deliveries for this project are scheduled for the third quarter.

Orders were also received for a commercial HERT[™] High Energy Reagent Technology[™] system as well as several HERT demonstrations for nitrogen oxide (NOx) control in the Midwestern and Southeastern United States. In addition to the foregoing, a boiler tuning contract was received, along with a number of supplemental equipment orders for previously secured business.

“We are off to a great start this year in Europe,” commented John F. Norris Jr., President and Chief Executive Officer. “In France, where all municipal solid waste incinerators will be required to control NOx emissions by the end of 2009, we have seen a strong pick-up in project activity, having already announced one NOx control initiative earlier this year. Discussions to secure other French MSW business are ongoing as are efforts to market our broadened suite of NOx control technologies throughout Europe.”

Mr. Norris concluded, “We are also pleased with the indicated level of interest in our recently acquired HERT technology which, in combination with our NOxOUT systems and combustion modification capabilities, offers our clients an unparalleled selection of economic solutions for achieving NOx control targets.”

About Fuel Tech

Fuel Tech is a leading technology company engaged in the worldwide development, commercialization and application of state-of-the-art proprietary technologies for air pollution control, process optimization, and advanced engineering services. These technologies enable customers to produce both energy and processed materials in a cost-effective and environmentally sustainable manner.

The Company's nitrogen oxide (NO_x) reduction technologies include advanced combustion modification techniques - such as low NO_x burners and overfire air systems - and post-combustion NO_x control approaches, including NO_xOUT[®] and HERT[™] SNCR systems as well as systems that incorporate NO_xOUT CASCADE[®], NO_xOUT ULTRA[®], Rich Reagent Injection (RRI) and NO_xOUT-SCR[®] processes. These technologies have established Fuel Tech as a leader in NO_x reduction, with installations on over 550 units worldwide, where coal, fuel oil, natural gas, municipal waste, biomass, and other fuels are utilized.

The Company's FUEL CHEM[®] technology revolves around the unique application of chemicals to improve the efficiency, reliability, fuel flexibility and environmental status of combustion units by controlling slagging, fouling, corrosion, opacity and acid plume, as well as the formation of sulfur trioxide, ammonium bisulfate, particulate matter (PM_{2.5}), carbon dioxide and NO_x. This technology, in the form of a customizable FUEL CHEM program, is being applied to over 95 combustion units burning a wide variety of fuels including coal, heavy oil, biomass, and municipal waste. A breakdown of the nature of these customer units is posted on the Company's website.

Fuel Tech also provides a range of combustion optimization services, including airflow testing, coal flow testing and boiler tuning, as well as services to help optimize selective catalytic reduction system performance, including catalyst management services and ammonia injection grid tuning. In addition, flow corrective devices and physical and computational modeling services are available to optimize flue gas distribution and mixing in both power plant and industrial applications.

Many of Fuel Tech's products and services rely heavily on the Company's exceptional Computational Fluid Dynamics modeling capabilities, which are enhanced by internally developed, high-end visualization software. These capabilities, coupled with the Company's innovative technologies and multi-disciplined team approach, enable Fuel Tech to provide practical solutions to some of our customers' most challenging problems.
