**FOR IMMEDIATE RELEASE**

**FUEL TECH TO PRESENT AT THE 30<sup>th</sup> ANNUAL  
CANACCORD GENUITY GROWTH CONFERENCE**

**WARRENVILLE, Ill., Aug. 6, 2010** – Fuel Tech, Inc. (NASDAQ: FTEK), a world leader in advanced engineering solutions for the optimization of combustion systems and emissions control in utility and industrial applications, announced today that Douglas G. Bailey, Chairman, President & Chief Executive Officer, and David S. Collins, Senior Vice President, Treasurer and Chief Financial Officer, will present at the 30th Annual Canaccord Genuity Growth Conference in Boston, MA. Fuel Tech is scheduled to present at 5:00 p.m. Eastern Time on Tuesday, August 10, 2010.

A webcast of the presentation and slide show can be accessed at the following link: [August 2010 webcast](#). The archived webcast will be available for 90 days following the presentation.

**About Fuel Tech**

Fuel Tech is a leading technology company engaged in the worldwide development, commercialization and application of state-of-the-art proprietary technologies for air pollution control, process optimization, and advanced engineering services. These technologies enable customers to produce both energy and processed materials in a cost-effective and environmentally sustainable manner.

The Company's nitrogen oxide (NO<sub>x</sub>) reduction technologies include advanced combustion modification techniques - such as Low NO<sub>x</sub> Burners and Over-Fire Air systems - and post-combustion NO<sub>x</sub> control approaches, including NO<sub>x</sub>OUT<sup>®</sup> and HERT<sup>™</sup> SNCR systems as well as systems that incorporate ASCR<sup>™</sup> (Advanced Selective Catalytic Reduction), CASCADE<sup>™</sup>, ULTRA<sup>™</sup> and NO<sub>x</sub>OUT-SCR<sup>®</sup> processes. These technologies have established Fuel Tech as a leader in NO<sub>x</sub> reduction, with installations on over 580 units worldwide, where coal, fuel oil, natural gas, municipal waste, biomass, and other fuels are utilized.

The Company's FUEL CHEM<sup>®</sup> technology revolves around the unique application of chemicals to improve the efficiency, reliability, fuel flexibility and environmental status of combustion

units by controlling slagging, fouling, corrosion, opacity and operational issues associated with sulfur trioxide, ammonium bisulfate, particulate matter (PM<sub>2.5</sub>), carbon dioxide and NOx. This technology, in the form of a customizable FUEL CHEM program, is installed on over 90 combustion units burning a wide variety of fuels including coal, heavy oil, biomass, and municipal waste.

Fuel Tech also provides a range of combustion optimization services, including airflow testing, coal flow testing and boiler tuning, as well as services to help optimize selective catalytic reduction system performance, including catalyst management services and ammonia injection grid tuning. In addition, flow corrective devices and physical and computational modeling services are available to optimize flue gas distribution and mixing in both power plant and industrial applications.

Many of Fuel Tech's products and services rely heavily on the Company's exceptional Computational Fluid Dynamics modeling capabilities, which are enhanced by internally developed, high-end visualization software. These capabilities, coupled with the Company's innovative technologies and multi-disciplined team approach, enable Fuel Tech to provide practical solutions to some of our customers' most challenging problems.
